Ref: Product Name and version

Dear Apple Export Department,

Since my App contains encryption that meets U.S. Government Export Regulation requirements for review and I currently do not have the requisite CCATS document, I would like to offer my product for sale on the Apple Store in the United States and Canada markets only.

To that end, I have only the United States and Canada boxes marked in my Apps metadata fields. All other countries and the Rest of World boxes have been disabled.

I understand that should I wish to expand my market to other countries on the Apple Store in the future, I will follow the U.S. Department of Commerce, Bureau of Information Security CCATS review process and notify Apple's Export Compliance Department to expand my markets as provided for in the BIS Regulations.

Sincerely,

Signature
